AIRPORTS ARE MUCH MORE THAN JUST PLACES OF ARRIVAL AND DEPARTURE

they are complex transport systems with the highest requirements in terms of safety, functionality and availability. Airfield areas such as taxiways, aprons and runways in particular must be able to withstand the highest loads at all times – around the clock, in all weather conditions.

Otto Alte-Teigeler GmbH has been a specialist in the maintenance of traffic areas for decades. With our renovation and maintenance technologies, we ensure that airports remain efficient in the long term – with minimal closure times, maximum safety and cutting-edge technical solutions. Our methods are tailored to durability, efficiency and the special requirements of flight operations.

We cordially invite you to learn more about our services and solutions. Together, we will find the right solution for your pavements.

“

For us, one thing always takes center stage:
the smooth and safe operation
of your airport – today, tomorrow and in the future.

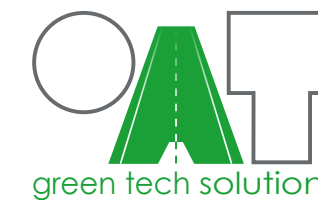

”

STRONG. CONNECTED. FUTURE-ORIENTED.

In addition to Otto Alte-Teigeler GmbH, we have the next generation on our side: OAT green tech services GmbH and OAT green tech solutions GmbH.

Together, we combine experience, innovative strength and technical expertise – from proven construction practices to modern, sustainable technologies. This alliance makes it possible to develop solutions that are not only technically impressive, but also future-proof and resource-efficient.

Strong generations – for strong pavements.

SPECIALISED. PROVEN. READY FOR USE.

From skid resistance to rubber removal and surface protection to slab replacement: our methods are designed to meet the highest requirements in aviation operations.

RUBBER REMOVAL

With our high-pressure water jetting technology, we remove rubber from runways professionally and in an environmentally friendly manner – without any chemical additives. This ensures safe take-offs and landings and maximum operational safety.

GRINDING & GROOVING

Grinding and grooving optimise skid resistance, evenness and drainage capacity on runways. OAT sets standards in surface treatment throughout Europe.

ASPHALT COATING

Onyx is an innovative preservation system for asphalt pavements. The system is an emulsion/water-based mastic designed for preventive maintenance. Its goal is to extend the service life.

CONCRETE PRESERVATION

Our hydrophobing and impregnation systems effectively protect concrete surfaces against specific stresses such as de-icing agents or moisture, contributing to a significantly longer service life.

SLAB REPLACEMENT

The use of rapid-set concrete and precast concrete slabs enables quick repairs in high-load-traffic areas: the replacement of damaged concrete slabs during short closure periods – ideal for runways, taxiways and aprons.

PARTIAL DEPTH REPAIR AND SURFACE RENOVATION

Damaged edges and surfaces of runways, taxiways and aprons allow water to enter and compromise safety. Rapid renovation with reactive resin protects against consequential damage and ensures functionality.

JOINT RENOVATION

OAT offers innovative solutions for joint technology at airports – whether for new construction or renovation. You can rely on our durable systems.

DEMARKING

We use high-pressure water jetting technology to remove all kinds of road markings at airports – quickly and gently, leaving the surface virtually untouched.

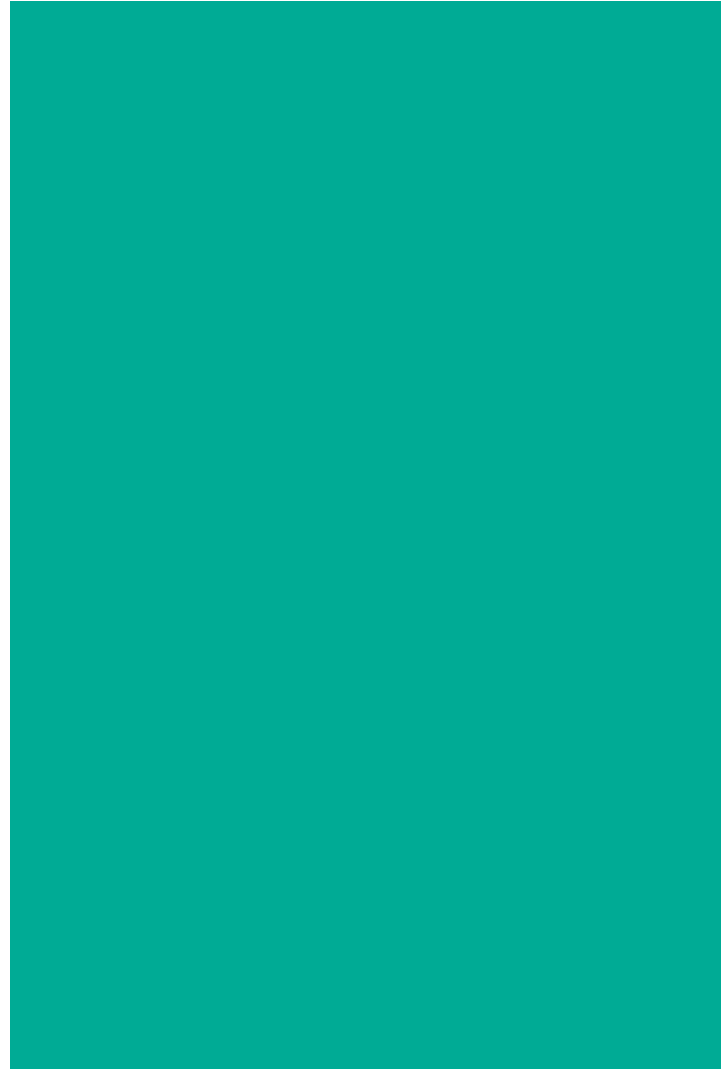

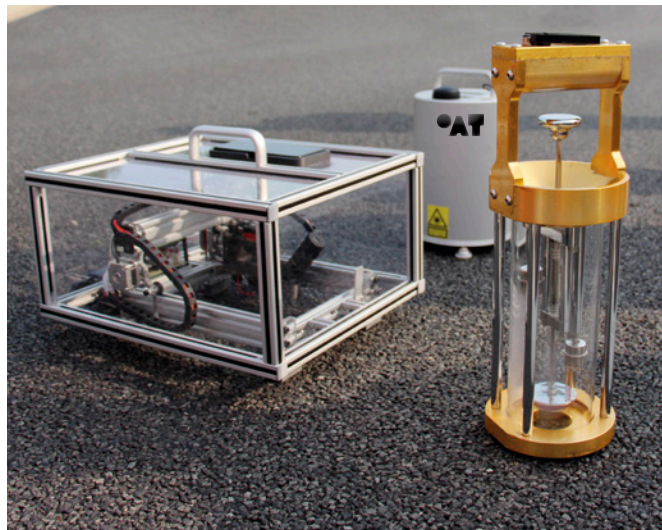

FAST. PRECISE. RELIABLE.

Short closure times, smooth flight operations – our technologies complement each other efficiently to keep your runways operational.

PRECISION. QUALITY. SAFETY.

Quality begins with execution and does not end with acceptance.
We secure processes and results –
for lasting functionality and maximum operational safety.

“When time
is short,
performance
must be
right.”

ALWAYS. EXPERIENCED. FOCUSED.

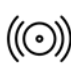

Our employees are highly trained and motivated –
to ensure smooth operations on your construction site.
With state-of-the-art machinery and vehicles, we are equipped for any task.

WELL-PRACTISED. EFFICIENT. READY FOR ACTION.

Together with you, we can master any challenge –
precisely, quickly and reliably.
For safe and trouble-free operations at your airport.
